

Task Manager

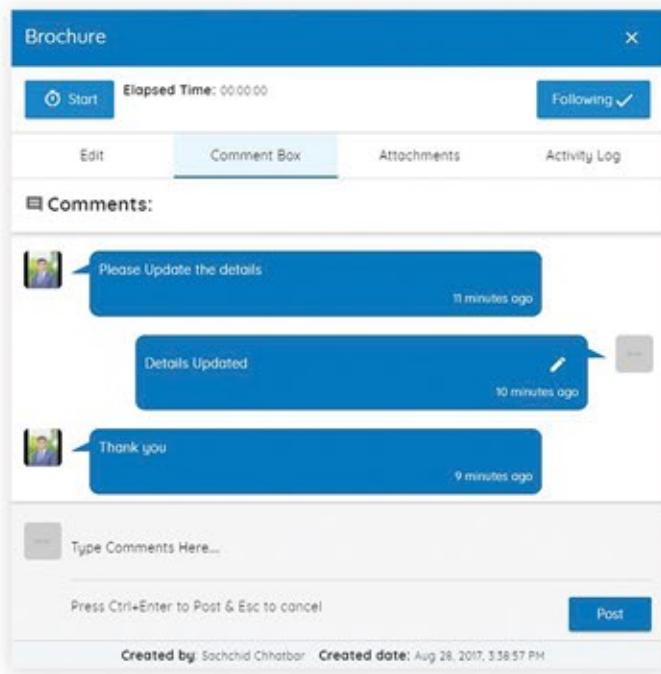

Organising Your Success

For every project to succeed, organizing is very important. It does not matter if you are working alone or as team, you are individual or an enterprise. We sat down with a client to understand their need of a single platform that allows a one/more people to handle/be a part of multiple teams. We wanted to create a solution that works for everyone, thus we created something that would act as a platform that offers creating and managing tasks. Thus we coined the concept of workspace and phases. This allows the user to navigate from one workspace to another. Phases allow user to create their own workflow on how task should move from one phase to another. This helps teams to adapt to their own needs and give a feel of a personalised dashboard.

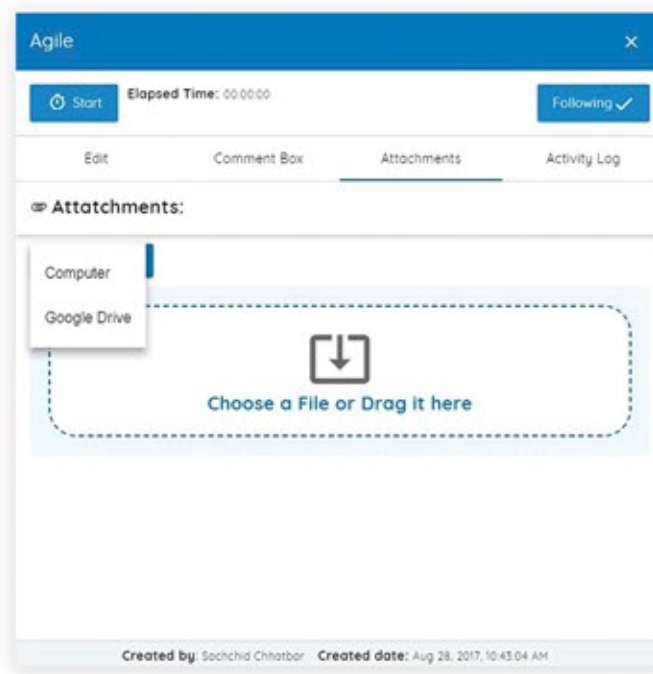

With the task manager working towards making sure that the tasks and assignments are conveyed in real time to the person who shall carry them out, it is expected to increase the efficiency in communication as well as creating additional value by tracking the time taken to complete the tasks.

Task Manager

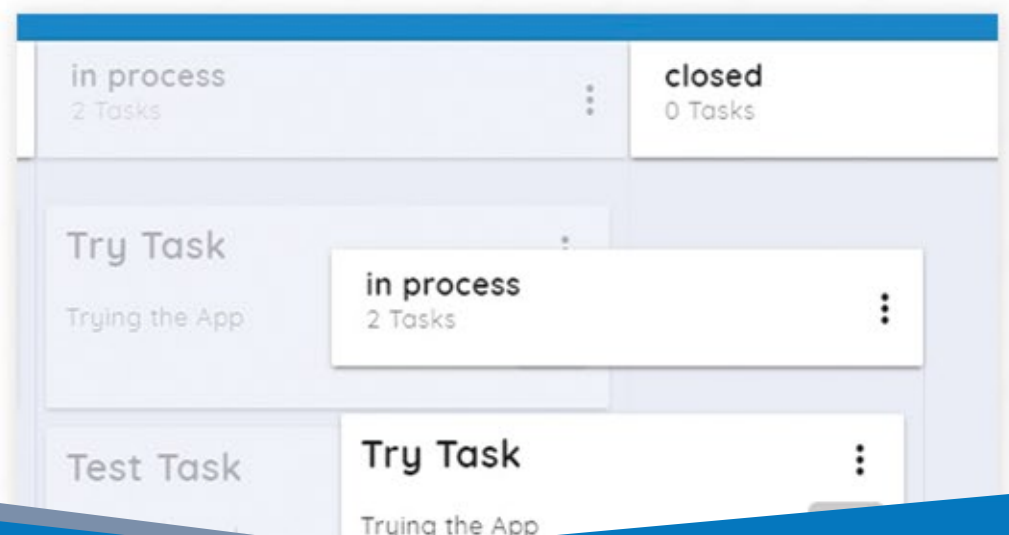

Organising Your Success

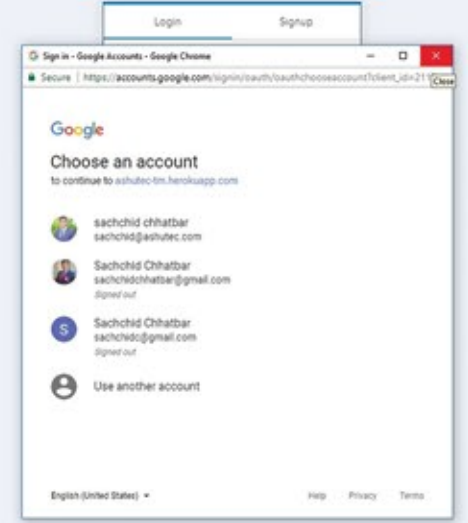

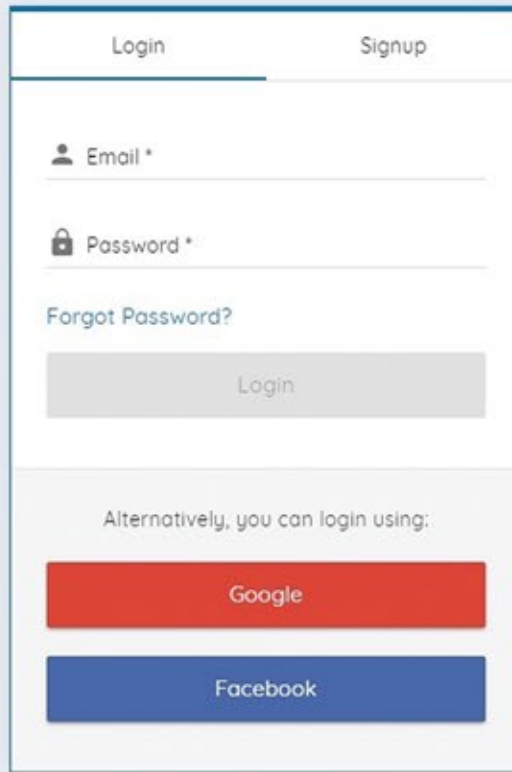

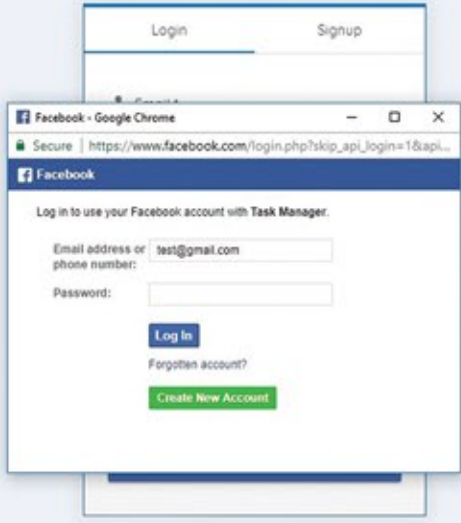

It is very important for that the source of information and its storage is well maintained during a project. Thus, the task manager enables the individuals working on a project together to create small work pieces, help the team to communicate interanly for better result, and also upload files to the workspace. Task Manager has also enabled the individuals to login using facebook/google.

The task manager enables the business/Manager to measureing -> Reviewing -> analysing. This product shall help the business understand the amount of time taken by an individual on a task/project assigned to them. This increases the chances of accuracy while budgeting of a task or project and increase profitability.

To creates an ease for the user to navigate and move the task up-or-down based on the priority, we introdcue a drag and drop functionality. This would enable the user to move the tasks, close the tasks, and managing the phases as per his/her requirements.
